Print and apply systems
for industrial operation

HERMES Q

Made in Germany

Data security in label printing

Modern manufacture sees marking systems work autonomous, interact among each other, with host computers or a plant control unit. Data security is a key issue. The integration of components, their administration and authentification are sensitive tasks demanded from the corporate IT. cab systems developed for printing and applying labels provide proper features by default, fairly protecting your data in a network.

Permissions can be assigned to users and restricted by passwords.

Access to network services (HTTP, FTP, VNC, OPC UA etc.) is possible only for users with authorization. Network services can be switched on or off.

WLAN can be switched on or off. WPA2, WPA2 Enterprise and WPA3 levels of security are supported.

Firmware updates are verified for integrity before installation.

Network protocols can be encrypted using TLS/SSL. To connect securely in a network, a certificate as required is installed in the device ex factory.

Printers in a network can be authorized securely. IEEE 802.1X network standard is supported.

USB slots can be locked and access to external storage media be denied.

All the current cab printing systems are based on the same electronics and firmware.
The printer language is the same, so are interfaces and memory. Any further developed operating system or driver is available immediately on every device. Resets to default settings are PIN-protected.

Contents

HERMES Q

Printing labels and applying them automatically in production lines

1.1

The slim one

to print small labels

Label printer		HERMES Q2	
Printable resolution	dpi	300	600
Print speed	up to mm/s	300	150
Print width	up to mm	56.9	54.1
Label roll outside diameters	mm	205 / 305	
Label width	up to mm	58	

1.2

The universal one

An industrial bestseller, providing a wide range of accessories

Label printer		HERMES Q4.3		HERMES Q4	
Printable resolution	dpi	200	300	300	600
Print speed	up to mm/s	300	300	300	150
Print width	up to mm	104	108.4	105.7	105.7
Label roll outside diameters	mm	205 / 305			
Label width	up to mm	114			

1.3

The wide one

to print Odette, UCC and GS1 labels in logistics applications

Label printer		HERMES Q6.3	
Printable resolution	dpi	200	300
Print speed	up to mm/s	250	250
Print width	up to mm	168	162.6
Label roll outside diameters	mm	205 / 305	
Label width	up to mm	174	

Sample applications

Label rolls

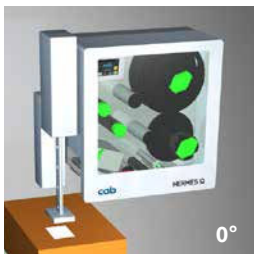
All units can provide an unwinder for picking up rolls with maximum diameter either 205 mm or 305 mm.

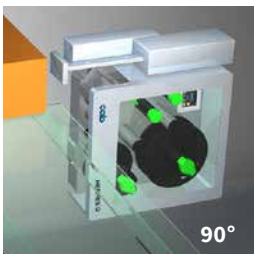
Directions to which dispense labels

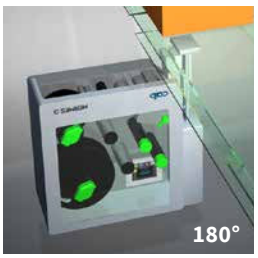
All units can be designed for providing labels either to the left or to the right.

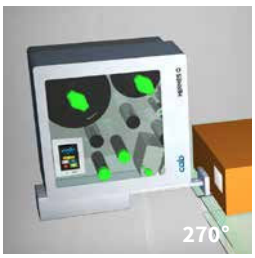
Orientations of assembly

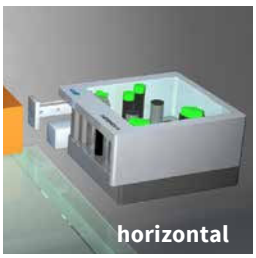
All the units can be rotated vertically by at most 360° or assembled in horizontal orientation.











HERMES Q in detail

1 **Operation panel**
Self-explanatory symbols are on display. The device can thus be operated intuitively and settings be configured easily.

2 **Ribbon holder**
On the basis of three-part tightening axles, ribbons can be replaced easily and quickly.

3 **Rugged metal chassis**
It is made of cast aluminum. All the parts are assembled to it.

4 **Applicator**
It is assembled to hinge pins. It can be pivoted in case of maintenance or if materials have to be replaced.

5 **Pressing plungers**
One is fixed near the chassis wall. The second one is pushed to the label margin, as far as necessary to evoke a good print image.

6 **Print head**
Units of the same width are interchangeable. Replacement requires only few steps.

7 **Print roller**
It can be removed/inserted quickly in cases of cleaning or wear.

8 **Peel-off plate**
Pivoting improves labels be applied to packages.

9 **Label unwinder**
A swing arm and an integral brake enable labels be unwound at constant force.

10 **Liner rewinder**
Subsequent to all the labels been dispensed, the entire liner tape is rewound. On the basis of a three-part tightening axle, a liner tape can be inserted and removed easily.

11 **Pulling system**
A liner tape is clamped between a draw roller and a pinch roller. Labels are dispensed using feed synchronous to the print roller.

12 **Label sensor**
Imprint is precisely set on spot on a label and materials ending detected by a transmissive or a reflective sensor.

Accurate imprint
The smaller a label, the higher are the demands regarding the accuracy of an imprint. Print offset can be reduced by ±0.2 mm using adjustable slip correction.

Print heads

Units of the same width are interchangeable.
They are detected by the CPU automatically and calibrated.
The print distance to the locating edge can be adjusted.

Major data such as the operational performance,
maximum operating temperature and heat energy
are recorded on the print head. Data can be read at the factory.

Print heads provided for HERMES Q2, HERMES Q4 - 300, 600 dpi
- sharp-edge print images
- e.g. when printing small fonts and graphics on typeplates
- e.g. when printing on materials requires high energy needs

Print heads provided for HERMES Q4.3, HERMES Q6.3 - 200, 300 dpi
persistent; when labeling in rough settings and thermal direct method

Print rollers

Two types of materials:

Print rollers DR
providing a synthetic rubber coating
They enable highly accurate imprint and are provided by default.

Print rollers DRS
providing a silicone coating
Product life is extra long, taken a higher print offset into account.

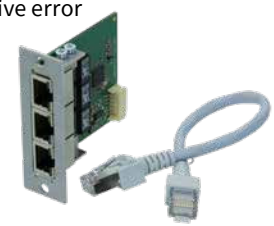
Interfaces

1. Slot to insert a **SD memory card**
2. **2 USB hosts** to connect a service key, USB memory stick, keyboard, barcode scanner, USB WLAN stick, warning light, an external operation panel
3. **USB 2.0 Hi-Speed** to connect a PC
4. **Ethernet 10/100 Mbit/s**
5. **RS232C** 1,200 to 230,400 baud /8 bits
6. **Digital I/O interface;** socket connector SUB-D, 25 pins
   compliant with IEC/EN 61131-2, types 1+3;
   All the inputs and outputs are isolated galvanically and protect from reverse polarity. In addition, outputs are short-circuit proof

PNP inputs	**PNP, NPN outputs**
Start printing or labeling	Device ready
Print first label	Print data available
Reprint	Initial / upper end position
Delete print job	Paper feed ON
Label removed	Label in transfer position
Stop printing or labeling	Label application / lower end position
Label feed	Pre-warning to a ribbon ending
Label rotated by 90° (to be applied by applicator 4214)	Pre-warning to a label web ending
Pause	End of a ribbon and/or a label web
Reset	Collective error

Option:

7. **2 port Ethernet switch 10/100 Mbit/s**



Operation panel

Self-explanatory symbols are on display. The device can thus be operated intuitively and settings be configured easily.

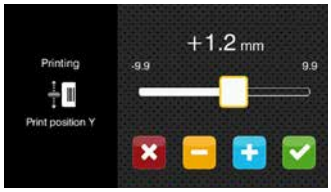
1. **LED:** Power ON
2. **Status bar**: data reception, record data stream, pre-warning to a ribbon ending, SD memory card / USB memory stick plugged in, WLAN, Ethernet, USB slave, time
3. **Printer status:** ready, pause, number of labels printed in a print job, label in transfer position, awaiting external start signal
4. **USB slot** to connect a service key or a memory stick, to transfer data to the IFFS memory
5. **Operation**
   - Printing and applying labels in individual steps
   - Jump to menu
   - Reprint the latest label
   - Interrupt and continue a print job
   - Stop and delete all print jobs
   - Label feed

Landscape or portrait display, depending from the orientation of assembly

Printer rotated by 90°

Setup options

Print parameters



Print offset Y

Print speeds

Video tutorials

External operation panel

If the operation panel of a printer cannot be accessed, an additional external one can be plugged.

Same functionality as on the printer

Landscape or portrait mode

Operability as desired on the external operation panel or on the printer

Printer connectivity: USB 2.0 Hi-Speed device

1. **LED:** Power ON
2. **USB port** to plug a service key or a memory stick, to transfer data to the IFFS memory
3. **Connecting USB cable** for power supply cab provides specified cables. Lengths are 1.8 m to 16 m.

Accessories

Accessorial products are plugged or screwed to a printer by the customer.

2.1 

SD memory card

2.2 

USB memory stick

2.3 

USB WLAN stick
2.4 GHz 802.11b/g/n
hotspot or infrastructure mode

2.4 

USB WLAN stick including a rod antenna
to extend the range of operation
2.4 GHz 802.11b/g/n + 5 GHz 802.11a/n/ac
hotspot or infrastructure mode

2.6 

Product sensor, 3 pins
to be attached to a front side applicator, a vacuum belt applicator or an air jet box. Labels are triggered to be applied as soon as a product has been detached, e.g. on a conveyor belt.

2.7 

Product sensor, 25 pins
Labels are triggered to be applied as soon as a product has been detached, e.g. on a conveyor belt.

2.8 

I/O interface connector SUB-D, 25 pins
All control signals can be attached to the I/O interface using clamping screws.

2.9 

Warning light
In addition to the information indicated on the display of a printer, states are signalled.

Red Collective error
Yellow Pre-warning to a label web or a ribbon ending
Green Device ready

USB cable (1 m) to connect to HERMES Q

Assembly materials are provided for vertical printer installation only.

1 Chassis assembly
2 Bracket assembly

2.10 

External operation panel
If the operation panel of a printer cannot be accessed, an additional external one can be plugged.

Same functionality as on the printer

Landscape or portrait mode

Operability as desired on the external operation panel or on the printer

Printer connectivity:
USB 2.0 Hi-Speed device

cab provides specified **connecting USB cables** for power supply.
Lengths are 1.8 m to 16 m.

2.11 

Label selection - I/O box
A maximum of 16 different labels can be selected from a memory card by a master control unit, e.g. PLC.

2.12 

Hand switch TR2
to be attached to the I/O interface

2.13 

Foot switch
to be attached to the I/O interface

2.14 

Connecting RS232 C cable
9/9 pins, 3 m

2.15 

Scanner CC200
provided upon request

Options are parts or units to perform special functions. They are assembled to a printer in addition to or instead of standards.

If order implies options be assembled ex factory, the part numbers of such printers and options are added by .250. Options delivered separately are added by .001.

3.1

assembly ex factory only

Automatic ribbon saving
Use is recommended in cases of at least 60 mm unprinted area on a label. While labels are fed, the print head is lifted and the ribbon stopped, resulting in less material consumption.

3.2

assembly to a printer ex factory excludes automatic ribbon saving

UHF RFID module
Read/write antennas are assembled directly to a print head or a feeding unit. Using a 4214 applicator enables defective labels be ejected.

See information on **www.cab.de/en/rfid**

3.3

Label unwinder K40
to process label rolls having a core diameter of 40 mm

3.4

Adapter 40/50
to pick up label rolls having a core diameter of 50 mm and minimum widths of 20 mm. One adapter is sufficient if material width does not exceed 50 mm.

3.5

Adapter 76/100
to pick up label rolls having a core diameter of 100 mm and minimum widths of 20 mm. One adapter is sufficient if material width does not exceed 50 mm.

3.6

Spacers
to process narrow labels provided on liners ≤ 20 mm wide, wound on a roll or a reel.

Ribbon protruding on both sides prevents from wrinkling. The label guidance is therefore offset by 7 mm from the middle wall with spacers.
A modified label sensor is included on delivery.

Reel plate wall thickness 1 - 2 mm

3.16

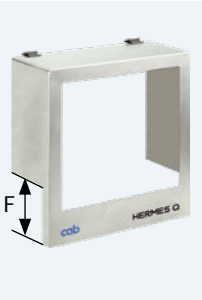
Label sensor, modified
Provided for labels requiring a sensor distant up to 26 mm to the locating edge. This sensor cannot be fixed with a screw.

3.7

Margin stop 10
to guide narrow labels provided on a liner 10 - 24 mm wide, wound on a roll (no reels) having a core diameter of 76 mm.

Operate only with a spacer

Options



Cover
to prevent from contamination and contact
Maximum outside diameter for label rolls is 205 mm
Assembly in vertical orientation, rotated by ± 90° or horizontally
Depth of a pad immersing Dim. F

	Dimension F mm		
	Standard	**Optional**	**upon request**
HERMES Q2	60	100	up to120
HERMES Q4/Q4.3	60	100	up to 120
HERMES Q6	25	-	up to 120

Print head pressure system, reduced force
Thermal direct printing requires less pressure on a print head.
Reduced force results in a decrease of wear. Product life extends.

Thermal direct printing only

Extended peel-off plate (+10 mm)
Recommended
- if labels are picked up by a robotic arm,
- if readable area is required for scanning,
- when installing an antistatic brush

Print roller DRS
Silicone coating enables an extra long product life,
taken a higher print offset into account

Antistatic brush
Electrostatic charge is reduced when plastic labels
are printed and peeled off.

Operate only with an extended peel-off plate.

Draw roller ZS
Made of steel, to avoid tension on a liner tape:
- if label height exceeds 150 mm
- when peeling off without backfeed
- if thick liner materials are processed
- when applying labels using a demand module 5114/16

Interface for plugging an external label sensor
M12 plug, 5 pins, a-coded
Plug-compatible with CEON and other sensors based on
PNP and 24 V

2 port Ethernet switch 10/100 Mbit/s
to connect another terminal device in a joint network.
Signals are looped through.

2 port Ethernet switch 10/100 Mbit/s			☐							

[1] Limitations can occur when processing small labels, thin materials or materials using a strong adhesive. Critical applications need testing.
[2] Spacers attached to the label unwinder and the unit rewinding the liner tape help feeding the ribbon centered above the labels.
[3] The ribbon must correspond at least to the width of the liner tape.

cab uses free and Open Source software in its products.
For information see **www.cab.de/opensource**

cablabel S3 software

Design, print, administrate

cablabel S3 opens up the full potential of cab devices. Creating a label is the first step. cablabel S3 adapts to requirements easily using a modular design. Plug-ins like the JScript Viewer support native JScript programming, as well as other features. The designer user interface and the JScript code synchronize in real time. The Database Connector and other special features can be integrated, so are barcode verifiers.

For further information see
www.cab.de/en/cablabel

Stand-alone printing

A printer can select and print labels even when the system is disconnected from a host.

Labels are designed using software such as cablabel S3 or a text editor on a PC. Label formats, texts, graphics and data taken from a database are transferred to a memory card, a USB memory stick or the internal IFFS memory.

Only variable data are sent to the printer using a keyboard, a barcode scanner, scale or another host system and/or are recalled from a host by the Database Connector and printed.

OPC UA

The latest cab printers are ready to interact with machines and components of different manufacturers in industrial plants.

An OPC UA server and a client are part of the firmware.

The server enables a printer be configured and controlled. Dynamic print data can be edited using a defined programming interface.

The integral client enables reading data fields from other machines ready for OPC UA, as well as transferring data to a label. No additional software is needed.

Printer control

Drivers

cab provides drivers to control a printer with software other than cablabel S3.

Free download on **www.cab.de/en/support**

Programming

JScript

cab printers embed JScript language.
Download free manual on **www.cab.de/en/programming**

abc Basic Compiler

Integral to the firmware, abc in addition to JScript enables advanced programming before data are edited for printout.
For example, external printer languages can be replaced without intervening in a print job in progress. Data may be imported as well from other systems such as scales, barcode scanners or PLC.

Connecting to SAP®

Labels can be printed from SAP[1] on cab devices and systems.
There are various methods:

- Printing with SAPscript
- Printing with SmartForms
- Printing with Adobe Interactive Forms

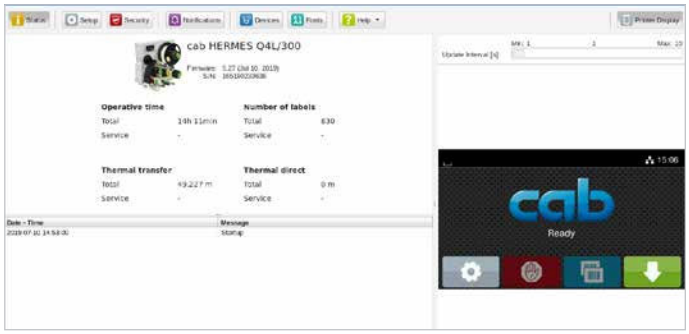
See instructions in detail on **www.cab.de/en/sap**

[1] SAP and associated logos are trademarks or registered trademarks of SAP SE.

Printer administration

Configuration on the Intranet / Internet

Integral HTTP / FTP servers enable a printer be controlled or configured, firmware be updated and memory cards be administrated using standard applications such as a web browser or a FTP client.
Administrators and operators on behalf of SNMP / SMTP are notified of states, alerts and errors by email or SNMP datagrams.
Time and date are synchronized by a time server.



Database Connector

Printers in a network may access data from a ODBC / OLEDB database and print it on labels. Data can be rewritten to a database while print jobs are in progress.

Applicators

Automatic labeling
The HERMES HQ applicators are a further development of the proven HERMES applicators, fully compatible, adding extra functions. Existing applications can continue without limitations.

Easy to configure
The applicator can be fully set on the printer control panel, configurations be stored and called up. Automatic calibration features speed up the setup.

Process control
Detailed statistical values are provided, so are sophisticated error messages. Constant control enables response right away in events of errors.

Updates
Applicator firmware can be updated on the printer control panel or the printer‘s web server. New features and specific solutions can therefore be tested right away and distributed in the field.

1. **Long product life**
   by a precise and low-wear linear guide
2. **Products of variable heights**
   Labels can be applied on different heights using a stroke cylinder. Its standard lengths are 200, 300 and 400 mm. Further lengths can be provided upon request.
3. **Protective chassis**
   is a standard to protect the cylinder and the guide. It can be provided adapted to the product jig on a labeling workstation.
4. **Highly reliable processes**
   Support air and intake air can be defined,so can stroke speed. Sensor control
5. **Label application**
   in real time. Small or large labels, 4 to 250 mm high and 4 to 174 mm wide, can be processed using an applicator
6. **Pivoting applicator**
   The print mechanics can be accessed quickly and easily in case of maintenance or if materials have to be replaced.

Options:

Pressure-reducing valve
It reduces the pressure exerted by the stroke cylinder to a product.

Pressure-reduced applicator
It has been designed for manual workstations missing a protective cover. The cylinder diameter is reduced to 12 mm. To prevent from injuries, a safety valve limits compressed air to a maximum of 4.8 bar.

F	Depth of a pad immersing in mm		00

A pad dips into a surface in the range of a label. See specified depths of immersion in the technical data of an applicator.

Swing applicator HQ 3214

Labels very small or midsized can be applied in real time, preferably from the side.

The pad locates in front of the peel-off plate. It picks up a label while it is being printed. A rotary cylinder pivots into position. The label is transferred to a product by a stroke cylinder. Rotary angles and linear hubs are adjustable.

[1)] calculated using labels 40 mm high and a print speed of 100 mm/s

Tamp-on pad
Labels are precisely tamped on plane surfaces. Recessed levels are possible as well.

Tamp-on pad, providing a damping layer
When applying labels to hard surfaces, the noise level is reduced. It benefits also in cases of rough structures or little unevenness.

Tamp-on pad, providing a label stop
It enables small labels be applied exactly on spot to a product.

Blow-on pad
It benefits when labels have to be applied to sensitive surfaces or products in motion. Labels are blown on by a blast of air. Stroke cylinder adjustment enables bridging distances of 5 to 10 mm to the surface of a product.

Flag applicator HQ 4712

Labels can be applied in real time from all sides precisely on round materials such as cables, hoses or pipes.

The pad locates in front of the peel-off plate. It picks up a label while it is being printed. The label is transferred to the spot of application by a stroke cylinder. A further cylinder guides the material all around the material using cam control. First, both endings of a label are stuck together. Then the label is tamped to the round material. The length of the stroke cylinder defines the maximum distance of a product to the peel-off plate.

Tamp-on pad
Labels are precisely tamped on plane surfaces. Recessed levels are possible as well.

Universal pad
Labels can be tamped on plane surfaces. Drilled holes are provided in gaps of 5 mm to suck a label. The holes are covered by a sliding foil, but can be opened according to the size of a label using a punching tool.
Delivery includes two extra foils.

Tamp-on pad, spring-mounted
Labels can be applied to surfaces inclined by a maximum of 15°. Heights witin the area of a label may vary by 10 mm at most.

Universal pad, spring-mounted

Stroke applicators HQ 4014, HQ 4016

Labels can be applied in real time from all sides to packages. The type of pad defines whether a package has to be at rest or can be in motion at the time a label is applied.

The pad locates in front of the peel-off plate. It picks up a label while it is being printed. The label is transferred to a package with the help of a stroke cylinder. The package is detected by a sensor and the pad returned to its initial position. The length of the stroke cylinder defines the maximum distance of a package to the peel-off plate.

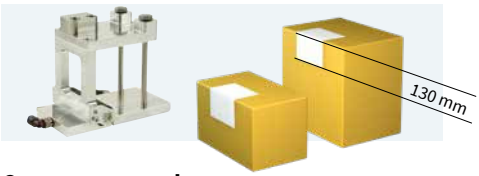
Blow-on pad
It benefits when labels have to be applied to sensitive surfaces or packages in motion. Labels are blown on by a blast of air. Stroke cylinder adjustment enables bridging distances of 5 to 10 mm to the surface of a package.

Roll-on pad
Labels are rolled on plane surfaces while these packages are in motion.



Corner-wrap pad
Labels are applied to a package on two sides adjacent to one another. One half of a label is applied to the top of a package. Then the other half of the label is rolled on.

Stroke applicators HQ 4024

- As much as 90 percent savings of compressed air
- Labels applied onto variable heights using one tamp pad

Labels are applied in real time onto packages of different heights.

A spring-mounted tamp pad enables labels be applied reliably even onto inclined surfaces. Three types are provided for labels as high as 40 mm to 100 mm, 150 mm and 200 mm. Labels may be 50 mm to 105 mm wide in each case.

Labels are sucked by an electrically driven fan.
Only the stroke cylinder requires compressed air.

Stroke blow applicator HQ 4614

Labels can be applied in real time from all sides on packages of various heights in motion.

The pad locates in front of the peel-off plate. It picks up a label while it is being printed. Powered by a stroke cylinder and detected by a sensor, the pad moves to a spot approx.. 10 mm above a package. The length of the stroke cylinder defines the maximum difference in terms of package heights.

Demand table HQ 5714

The demand table is a transfer module for the HERMES Q 4 in the left-hand version and enables printed and predispensed labels to be picked up by a robot. The labels are at rest during the pick-up process.

After printing and dispensing, the labels are placed over the extended Peel-off plate, adhesive side facing the dispensing table, ready for transfer to the robot stamp. The labels are at rest during removal. After removal, an automatic retraction can be performed on the printer.

The orientation of assembly of the system is designed for vertical removal.

Optionally, the printed label can be verified by a Scanner (provided by the customer) before it is transferred to the tamp pad. To support the label transfer to the print stamp, an optional chamber system with supporting air holes can be used.

4.14

Label application tolerance	mm	± 0.5
Compressed air	bar	no compressed air; 4.5 bar is an option
Cycle rate	labels/min up to	30

Air jet box HQ 6114

Labels can be applied to packages in motion or at rest.
Each label is sucked by a fan and blown off by a powerful blast of air coming through aligned nozzles. Depending from the size of a label, a maximum distance of 200 mm can be bridged between a package and the peel-off plate.

4.15

1 Template
to cover all the holes sucking or blowing off air outside a label

By holes pre-scored on an 8 x 8 mm pattern, a template can be adapted easily to the size of a label. By sliding in a template between the suction block and rails, the surface outside a label is covered. Scope of delivery includes five templates.

Cycle rate[1)]		labels/min up to	100

[1)] calculated using labels 50 mm high, a print speed of 250 mm/s, a blast of air lasting 100 ms, with packages located 100 mm to the peel-off plate.

Accessories provided for applicators

5.13

Blow tube
to provide support air. To assist label transfer, the label is blown from below to the pad.

Provided for 2", 4" or 6" label applications

5.14

Unit to regulate compressed air
4.5 bar default setting

Provided in a left-hand or right-hand design

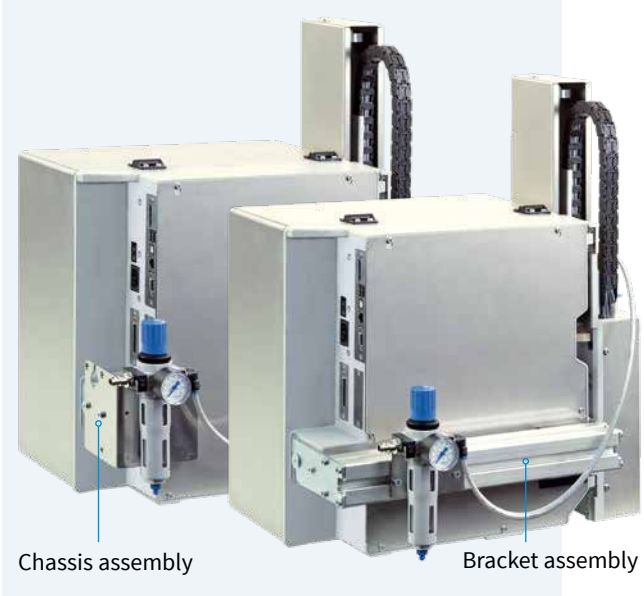
Delivery includes a fine filter, a pressure control valve with a display, a hose to connect to an applicator's compressed air input and material to assemble the unit to a chassis or a bracket.

5.16

Unit to regulate compressed air, providing a shut-off valve
to vent a hose line subsequent to the unit

Provided in a left-hand or right-hand design

Examples how to assemble a unit to regulate compressed air



Options provided for applicators

5.17

Pressure-reducing valve
It reduces the pressure exerted by the stroke cylinder to a product.

5.18

Pressure-reduced applicator
It has been designed for manual workstations missing a protective cover. The cylinder diameter is reduced to 12 mm. To prevent from injuries, a safety valve limits compressed air to a maximum of 4.8 bar.
